

Definition of done: Cleaned up code, commented, reviewed and tested criterias met and approved by the product owner

- All code shall be commented. Either comments within methods, or JavaDoc'ed methods. Both are preferred.
- The code shall be tested before merging it, by running it and with Unit testing both for regular java code, but also Android specific code.
- The methods in the source code will be kept as short and simple as possible.
- Acceptance criteria has been fulfilled
- The Google Java Style Guide should be followed for all code.
- The code that is added should follow the MVC design pattern.
 - Model: the data that the "view" is using
 - View: Uses the data from the model to update the user interface
 - Controller: takes care of everything else.
- Inform the product owner of code that has been reviewed so they can merge it with the master.
