

- What do I want to learn or understand better?

I have noticed that we are all on different levels and have different prior experience in many fields. For example we have myself that isn't so familiar with the github workflow and then other team members that are comfortable with the workflow. I would like to learn how real companies work whenever there are situations like this. How do they split up the work then, how do they make sure everything is done within the time estimated, etc.

I really want to learn the github workflow, I have so far understood it is useful to know and have that knowledge. To start learning the github workflow I watched a couple of videos on youtube and I did the github get started project to get a better feeling and learn how to use the platform better(it worked really well).

- How can I help someone else, or the entire team, to learn something new?

It has been very helpful to me whenever a question is asked openly to the whole group. So I would say asking questions is the way I could help my teammates also, the same way it has helped me whenever somebody else has asked questions.

What is my contribution towards the team's use of Scrum? What is my contribution towards the team's deliveries?

This week we created the first user stories for the project and I contributed by designing the icon and brainstorming names for our app.
